

Corporate Finance Of Technology Companies

Abstract

In the modern world, business develops through the implementation of various projects and programs. Moreover, among these projects, a special place is occupied by technology projects and business initiation, where financial management requires special skills and knowledge.

The discipline "Corporate finance of technology companies" is designed to form masters' general knowledge and practical skills in building financial models for assessing the effectiveness of a project, calculating various necessary business efficiency ratios, as well as making management decisions.

In the discipline "Corporate finance of technology companies", special attention is paid to the use of software products, with the help of which financial models acquire comprehensive qualities, and enable the necessary changes in them to obtain relevant results and information about business performance.
